Liability-Aware Investing (LAI) for Public Pensions

Seattle City Employees' Retirement System (SCERS)

Background

- Established in 1929
- Supports non-uniformed City employees
- > 20,000 active, retired and deferred members
- \$4 billion in assets
- 76% funded status

Governance

- 7-member Board of Administration/Investment Committee (3 City representatives, 3 member representatives, 1 independent)
- Board-appointed Investment Advisory Committee of local, independent investment experts
- 4-person investment team who, alongside consultant, recommend investments actions to the Board/Investment Committee for approval

Unconventional thinking

Portfolios should be more aware of the liabilities that they support

- Opportunities to improve performance/risk assessment and investment strategy

Down markets offer a silver lining and up markets a fool's paradise

- Changes in expected returns have an offsetting impact via plan liabilities

Cash is not “risk-free” for a plan with long-lived liabilities

- Cash and other short-term assets introduce substantial reinvestment risk

Traditional framework

Assets

Investment portfolio

→ Portfolio return

Liabilities

Future benefit payments

→ Benefit structure
→ Demographics
→ Inflation

Discount rate

→ Expected portfolio return

Liabilities: future benefit payments

Liability-Aware Investing (LAI) framework

2022 performance

Assets

- -9.8% return
- Worst annual performance since Global Financial Crisis
- 13% funding ratio decline based on market value of assets

Plan (Assets + Liabilities)

- Increasing interest rates, earnings yields, rental yields, etc.
- +0.9% change in expected return*, leading to lower liability value

*Blend of investment consultant's 10-year and 30-year return assumptions

Asset-Liability generalized relationship

Liability-Aware Investing (LAI) defined

- ✓ **LAI is a broad framework that explicitly recognizes the linkage between plan assets and liabilities**
- ✓ **LAI is tailored to investors, such as public pension funds, who discount their liabilities based on expected portfolio return**
- ✓ **LAI incorporates funded status volatility, as a complement to conventional asset return volatility**
- ✓ **LAI can revolutionize performance & risk assessment and improve investment strategy**

Plan performance

Note: SCERS-calculated expected portfolio return based on a blend of investment consultant's 10 and 30-year capital market assumptions

Winners and losers

Asset class attractiveness when changing to liability-aware

Long-Term	Intermediate-Term	Short-Term
<ul style="list-style-type: none">• Equity (Public & Private)• Real Estate• Infrastructure• Long-Term Fixed Income	<ul style="list-style-type: none">• Core Fixed Income• Credit Fixed Income	<ul style="list-style-type: none">• Cash• Hedge Funds• Commodities
		

A missing ingredient

Long-Term Fixed Income was added to the asset class menu during the most-recent asset-liability study in 2023

- ✓ **Attractive risk profile**
Very well-aligned with SCERS's long-lived liabilities
- ✓ **Improved expected return**
Beneficiary of higher interest rate environment
- ✓ **Tailored structure**
US Treasury fixed-rate and inflation-protected securities with 10 to 30-year maturity

Perfecting the recipe

Target/Metric	Prior	Current	Difference
Long-Term Asset Classes	75%	79%	+4%
Public Equity	48%	46%	-2%
Private Equity	11%	11%	-
Real Estate	12%	12%	-
Infrastructure	4%	5%	+1%
Long-Term Fixed Income	N/A	5%	+5%
Intermediate-Term Asset Classes	25%	21%	-4%
Core Fixed Income	18%	14%	-4%
Credit Fixed Income	7%	7%	-
Portfolio Expectations			
10-Year Return	6.5%	6.5%	-
30-Year Return	7.5%	7.5%	-
Asset Volatility	13.5%	13.3%	-0.2%
Funded Status Volatility	7.8%	7.6%	-0.2%

Liability Aware Investing for Public Pension Plans

Formulating the role of liabilities in asset allocation and performance measurement

August 2021

SUMMARY

- Public pension plans tend to focus disproportionately on investment performance while paying only cursory attention to liability performance. We believe public pension liabilities can, and deserve to, play a more central role in portfolio construction and holistic performance measurement.
- Assets and liabilities are inextricably linked through the expected return on assets (EROA) discounting mechanism. Realized investment returns drive plan assets, but also plan liabilities as a consequence of their impact on asset valuations and thus forward-looking expected returns.
- This paper introduces Liability Aware Investing (LAI) as a broad portfolio construction and risk management framework that explicitly incorporates this linkage between plan assets and liabilities and funded status volatility as a holistic measurement of total plan risk that quantifies the expected tracking error between assets and liabilities.
- LAI is NOT corporate pension liability-driven investing (LDI) applied to public plans. Rather, LDI can be conceptually understood as a narrow application of the broader LAI framework.
- Asset class risk characteristics are altered when shifting from a traditional asset-only framework to an LAI framework. For example, some like public equity become more attractive while others like cash become less attractive. LAI leads to moderate asset allocation changes relative to traditional asset-only mean-variance optimization techniques. In this sense, it can augment, rather than replace, current industry practices.
- LAI may justify taking on higher levels of asset volatility than a plan would otherwise accept before considering liability impacts, and thus support higher allocations to return-seeking assets. For example, the funded status volatility of public equity is lower than its asset volatility.
- LAI can be a helpful additional tool for communicating total plan risk and performance to investment committees and other plan stakeholders.
- This piece presents the groundwork and initial conceptual framework for LAI including broad principles and risk analytics. In practice, we expect adoption and implementation methods across the public plan universe will vary based on unique plan characteristics, governance and beliefs as well as over time.
